Soumya Ranjan Harichandan

Staff Product Designer, Bengaluru. Enterprise software.

soumya.chandan123@gmail.com +91 78935 03294 linkedin.com/in/soumya-r-h behance.net/soumyachandan

Summary Ten years in product design, including two companies I founded and ran. The last five have been enterprise software: healthcare billing, commodity pricing, now contract management. I do my own research, and I work on dense professional software where the first job is understanding how people actually get through the work and the second is getting the structure underneath it right.

Experience

Dec 2025 — Present

Staff Product Designer

Conga · Conga Advantage CLM

Design lead on the ground-up redesign of Conga Advantage CLM, a contract lifecycle platform used by legal, procurement and sales operations teams. I run the research and the design across the clause library, document authoring, obligation management and the review cycle, working with product and engineering from problem definition through to spec.

- Redesigned the clause library around the negotiating position rather than the clause, so it records what the business will agree to and why, with the precedent attached. Six screens on that model: authoring, browse, the Word sidebar, negotiation review, and a health view for the library itself.
- Worked out what a contract manager needs to know about an obligation and got it down to seven questions: who owes what, to whom, by when, how, under what condition, with what consequence. Those same seven became the scorecard for Ironclad, DocuSign CLM, Icertis, Sirion and Agiloft.
- Defined how drafting works across the platform and the Word add-in. Draft content stays separate from agreed content, AI suggestions have to be accepted before they count, and only one place owns the document at a time. Thirteen use cases and seven flows, now the spec engineering builds from.
- Mapped the review cycle: thirty steps across eight phases, one of them automated. Being able to edit mid-review is what reviewers want and no vendor offers, so that is where I pushed, along with a simpler way to set up who reviews what.
- Ran the research behind all of it. Usability audits of admin settings, survey work on send-for-review, a picture of where business-side admins get stuck, and competitive teardowns I took to VP level.

Lead UX Designer

Shell · Shell Market India

Pricing Toolkit. Shell's internal marketing team tracks market trends and forecasts prices across chemical lines, and sales executives negotiate client deals against those forecasts for a given period. The brief was a platform that let the team run all of it themselves.

- Designed one workspace for the full forecasting cycle, pulling together activities that had been spread across separate tools and rebuilt by hand each month.
- Built the trend views the forecasts get read off, so an analyst can see what moved and over what period before committing to a number.
- Forecasts feed straight into client negotiations, so every number needed its working visible behind it.

Founder, Creative & Marketing Head

Espressoulster / Urban Brunch Cafe

- Ran the brand side of a café I co-founded: menu, service flow, interiors, marketing.
- Did the customer research myself (surveys, focus groups, and a lot of watching people in the room) and used it to set the menu and the layout.
- Grew it to ₹20M a year. We are selling the business now.

Sep 2021 — Sep 2022
1 yr

Senior UX Designer

athenahealth · Revenue Cycle Management

Remittance posting and tracking. When a US payer raises an issue on a claim, payer and practice exchange information to resolve it, and athenahealth helps practices track claim progress through alarms and follow-ups. Covid-19 had pushed total follow-up cost to $20M/year while minimum service-level commitment fell 30%.

- Ran discovery with product to find where the follow-up cost was actually going, then sized each area with the analytics team before anyone committed to a plan.
- Worked with analytics and engineering to turn what we found into a delivery plan.

> Discovery turned up several opportunities worth roughly $2M/year in saved follow-up cost.

Jun 2021 — Oct 2021
part-time

Design Consultant

Enterpret

Enterpret reads the qualitative customer feedback a company generates across every channel and finds patterns in it with ML, so product and customer teams can make roadmap calls on evidence.

- Built the roadmap off user research and prioritised it against what the business needed.
- Ran design sprints, tested mockups with users, and stayed with engineering through implementation.

Jun 2016 — Sep 2021
5 yrs 4 mos

Founder, Design & Product Head

Cusmat Technology

Started Cusmat to build immersive, personalised training, and spent five years putting the processes and pipelines behind it in place as much as the product itself.

- Grew it to 40 people and raised seed funding at a $10M valuation. The company is still running.
- Ran five revenue-generating product lines through their full lifecycle, and stood up the company's first research function.
- Built the Insights & Growth team with our business lead. Owned design: personas, workflows, wireframes, prototypes, and the interaction specs engineering worked from.

Practice

Research	User interviews, contextual enquiry, survey design, usability testing, competitive teardowns, synthesis, opportunity sizing
Design	Information architecture, user flows and journey mapping, task analysis, interaction design, wireframing and prototyping, design systems
Product	Problem definition, roadmap, data and object modelling, competitive strategy, working with engineering constraints
Leadership	Building design and research teams, stakeholder management, cross-functional collaboration
Domains	Contract lifecycle management, US healthcare revenue cycle, commodity pricing, ML feedback analytics, immersive learning, food and beverage

Education

B.Tech, Civil Engineering

National Institute of Technology, Warangal · 2012 — 2016

Exchange Programme, Summer Intern

Kitami Institute of Technology, Japan · Mar — Aug 2015
